OPEN MAINFRAME PROJECT

Open Mainframe Project is accepting eight student interns during the summer of 2018 to work in the Linux and Open Source on Mainframe development community. Each intern will work closely with a mentor for the duration of his/her internship. For a list of suggested intern development projects, please see our Project Ideas Page. Internship development projects do not need to be limited to ideas on this wiki page. If you have a great idea for a development activity for Linux and Open Source on Mainframe, you can submit the idea as part of your application and, if chosen, the Open Mainframe Project Internship Administrator will find a suitable mentor for you.

Each intern will work remotely from his/her location of choice. There is no physical work facility provided or required.

The Open Mainframe Project will also give the ability for each intern successfully completing the program to present their project at an industry conference. The Open Mainframe Project will provide a stipend for travel for each student. To help support the student for presenting, the project will provide professional resources and training to help build their presentation skills.

INTERNSHIP PROPOSALS

Please send your project proposal(s) to https://www.openmainframeproject.org/projects/internship/apply by the application deadline (February 16th, 2019).

KEY DATES FOR 2019 PROGRAM

February 16th, 2019	Application Submission Deadline
March 16th, 2019	Intern Acceptance Notifications Sent. Interns should begin research in their chosen project area to be ready to start bonding period.
